

REAP ALL THAT YOU SOW.

Built with the legendary AFX single-rotor design, **Case IH 2300 Series Axial-Flow Combines** set the standard in rotary combine technology for a more productive harvest. The simple design of the AFX rotor offers multiple-pass, grain-on-grain threshing for superior grain quality and allows for improved crop flow and throughput capacity. Full authority electronically controlled engines are new for 2006. These engines provide quicker response and higher levels of performance. While harvesting, 20 hp power rise is available to pull you through the tough spots. Engage the unloader and get an additional 20 hp boost, taking peak performance to 325 hp. With access to flexible financing, reliable parts and expert service, you owe it to your bottom line to talk to your Case IH dealer about 2300 Series Axial-Flow Combines.
