data center. hosting. managed services.

DELIVER MORE_

How do you build an IT infrastructure for the future when you can't be certain what next month is going to hold for your business?

That is exactly why Latisys is quickly becoming the managed IT provider of choice for Fortune 500 and start-up companies alike. Latisys offers more total return on your IT infrastructure investment by reducing your own capital expenditures for storage and ongoing maintenance.

Data center, hosting and managed services from Latisys extend and enhance your company's technology infrastructure by providing you with the reliability you need and the flexibility you can't find anywhere else. And with today's data center, server and storage challenges looking like just the beginning, more and more customers are turning to Latisys to **Deliver More_.**

More_Flexibility

Our rapid response specialists offer real-time turnaround of your dedicated or collocated servers to make sure your business is ready to handle any surges in demands when the market strikes. This ability to deploy and scale additional resources on the fly is one of the most popular reasons our clients abandon trying to manage their own in-house IT operations.

Is Your Data Center Future Compatible?

With high-density data centers strategically located across the United States, Latisys offers scalable outsourced IT infrastructure management solutions to keep you ready for whatever the future holds for your business. Our attention to security is unrivaled in the industry, ensuring only pre-authorized access to all server areas. And each facility has been specifically designed for the business continuity of your mission-critical operations.

COLOCATED CABINET SOLUTIONS

Our secured locking cabinets are available in third, half and full-size options, perfect for accommodating your organization's growth.

CUSTOM CAGE SOLUTIONS

Our floor-to-ceiling cage walls can be customized to fit your specific requirements, and access will only be allowed for your designated representatives. Complimentary access to wireless internet and customer lab is also available.

PRIVATE MICRO SUITES

A true colocation of your private data center in our secure and connected facility features dedicated power and cooling supply within solid walls and a Secured Proximity Card access entry.

TAKE THE GREEN INITIATIVE

The cost of powering a server array over a 3-year period often exceeds the costs of buying it. At Latisys, we actively seek to make our operational facilities eco-friendly to benefit both our customer's bottom line and the community at large. We utilize high-efficiency power system components that operate with reduced emissions, and environmentally-friendly building design and materials that reduce the demands on cooling to the facility.

More_Security

From redundant power and network feeds to proximity cards, video security and biometric scanners, the integrity of your business infrastructure is always our primary concern. You can rest assured that your mission-critical infrastructure will always be protected with only your pre-authorized personnel allowed access to it.

Move to a Home You'll Never Outgrow

Latisys delivers worry-free IT management with customized managed hosting solutions that help deliver the maximum return on your IT infrastructure investment while always keeping you positioned for growth.

Whether your operations call for a simple managed hosting solution with a single dedicated server or a multi-layer, complex managed hosting design with application and database servers, Latisys has the experience to deliver reliable performance at any one of our Tier III facilities, equipped with redundant networks, high-security, redundant power and 24x7 on-site technical expertise.

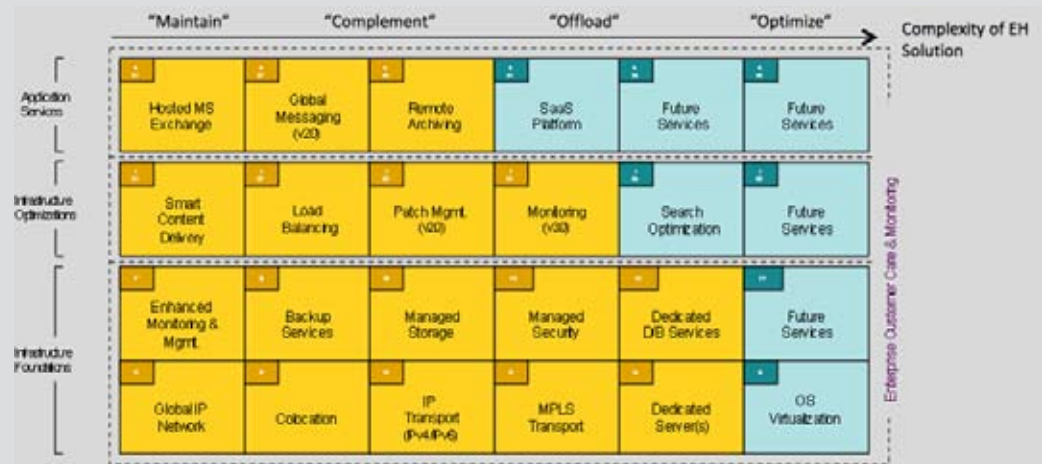

Managed hosting solutions from Latisys are designed using only the best components available, including:

- Intel multi-core processors
- RAID with every server
- Microsoft Windows Server or Red Hat Enterprise Server
- Premium, multi-carrier bandwidth

ALL SYSTEMS GROW

Our rapid response specialists offer real-time turnaround of your dedicated or collocated servers, so you can take advantage of every market upswing without wasting a penny more than you have to.

More_Performance

With multiple Tier-III data centers across the United States, Latisys simply has more capabilities and potential solutions than other providers can match. Our breadth of infrastructure management services answers your call for responsive IT management – all to make sure your mission-critical operations stay up and running at peak performance.

So You Can Spend More Time Growing Your Business

Maximize your IT budget and staff by offloading your routine IT functions to Latisys. Our managed services are tailored to relieve increasingly burdened IT staff from the non-revenue generating tasks they often find themselves performing.

Managed Security

Firewall, Intrusion Detection, VPN and Patch Management Services are all available for your colocated or managed hosting environment. With additional services like e-mail spam and virus-filtering, we offer a comprehensive suite of security solutions to cover all aspects of your infrastructure.

Managed Backup and Recovery

Industry leading backup systems protect your critical business data from loss and ensure timely recovery.

Managed Storage

Storage Area Network (SAN), Network Attached Storage (NAS) and Direct Attached Storage improve your ability to have reliable, consistently available data.

Managed Performance

Load balancing technology provides maximum availability.

Professional Services

From remote hands to intense administration, our professional services are designed to reduce the time you spend managing your environment.

More_Expertise

Our technology specialists will work one-on-one with you to determine what infrastructure makes sense for your current operation and growth desires, and create a scalable solution that's ready to grow with you the second your business demands it. With 24x7 on-site assistance and direct access to our team of Senior IT Personnel, you can be confident that your configuration is optimized to meet and exceed all of your requirements and then some.
